📍 Randburg, South Africa

🐙 github.com/Kaylin98

Full Stack Software Engineer specializing in .NET, C#, and Angular, with a track record building scalable backend architecture and high-performance interfaces for enterprise platforms. Equally at home going deep on side systems — from home automation to physics-based games built in Unity.

SKILLS

Backend

C#

.NET

ASP.NET Core (MVC)

Web APIs

RESTful APIs

Frontend & Mobile

Angular

TypeScript

JavaScript

Blazor

Tailwind CSS

Xamarin Forms

Data & Cloud

Microsoft SQL Server

Oracle SQL

Azure App Services

Azure Media Services

Tools & Others

GitHub

Docker

CI/CD

Raspberry Pi

PC Building

Game Development

Unity 6

C# (Unity)

HUD & Post-Processing

EXPERIENCE

Software Developer **iOCO**

06/2024 – Present | Midrand

- Engineered core modules for Toyota's e-ToyotaONE Dealership Management System
- Handled end-to-end feature delivery: robust .NET APIs processing complex dealership data, wired into high-performance Angular interfaces
- Focused on building architecture that scales and UIs that dealership staff can actually navigate without friction

C#

.NET

SQL

Angular

RESTful APIs

Agile Development

Full Stack Software Engineer **Sovtech**

05/2022 – 06/2024 | Randburg

- Built robust, efficient solutions for client Deloitte using ASP.NET, .NET Core, and Blazor
- Deployed and scaled applications on Azure; delivered a cross-platform Xamarin Forms app with live-streaming via Azure Media Services
- Migrated a legacy API to a modern .NET version and built Angular/C# systems that streamlined business processes

ASP.NET

.NET Core

Blazor

Azure

Xamarin Forms

Angular

C#

Software Developer **FPT Group (Pty) Ltd**

03/2021 – 04/2022 | Durban

- Developed a truck booking system across web and Android for a logistics platform
- Built RESTful APIs bridging legacy and modern systems
- Developed services for a Warehouse Management System

Angular

C#

RESTful APIs

Developer (Graduate) **Datacentrix**

02/2020 – 02/2021 | Durban

- Created a Business Process Management system (Leave System) for the Graduate program
- Tested the Qatar Foundation app system
- Tested the SANParks (South African National Parks) supply chain management system

C#

Business Process Management

System Testing

Software Developer (Intern) **Sage**

12/2018 – 01/2019 | Durban

- Supported and updated existing programs at the market leader in integrated accounting, payroll, and payment systems
- Debugged and troubleshooted production issues while learning to code in AngularJS on the job

AngularJS

Debugging

EDUCATION

BSc Computer Science & Information Technology

University of KwaZulu-Natal, Durban | 2016 – 2019

PROJECTS

Thrust Issues

A physics-based rocket flyer across three hazardous worlds — thrust with Space, rotate with the arrow keys, fighting momentum as much as gravity.

github.com/Kaylin98/thrust-issues

Hold My Beer

A physics-based endless runner where every drink collected raises your speed, built around dynamic velocity stacking and a coroutine-driven power-up system.

github.com/Kaylin98/hold-my-beer

Trigger Happy

A high-speed FPS built for raw movement and reflexes, with multi-camera layering and a controller tuned for lag-free web deployment.

github.com/Kaylin98/Trigger-Happy

Dhoom

A cinematic rail-shooter through a volcanic sector, built around Timeline-driven cutscenes, a wingman system, and multi-stage boss encounters.

github.com/Kaylin98/Dhoom
